## Projects

### ● Title: Mobile Price Comparator

Mobile Price Comparator is a platform which is used to see the list of mobiles from various vendors and prices of mobiles from various ecommerce sites like amazon, flipkart etc. All the information of mobiles and prices are gathered by using Web Scraping. The information are gathered in database and the showcased in the homepage. It has two users admin and consumers. Admin is responsible for fetching the information. This is built using Java, Jsoup library (web scraping), servlet, JSP, HTML, CSS, Mysql.

### ● Title: Student Fee management system

Student Fee management system is built to help manage the fee records of students. It has two users Admin and Accountant. A fee management application where admin can add, edit, view, delete accountant and accountant can add, view, edit, delete student, check due fee and logout. This is built using Java, Servlet, JSP, HTML, CSS, MySQL.

### ● Title: Super Market Billing System

The supermarket billing system is built to help supermarkets calculate and display bills and serve the customer in a faster and efficient manner. It is a simple console based application. It basically has two users- Admin and Operator. Admin has various operations like view all product, add new product, delete product, modify product and operator has operations like rate list, bill calculator. This system is build using C++.
